

Team Feedback Report

1. What theme have you decided for your project?
Digital Society
2. What is your problem statement?
All farmers aren't digitally literate. On top of that, there are numerous schemes launched by Government for them. This portal will help farmers know what exact schemes then can apply along with necessary documents; other special schemes and crop prices.
3. What is the scope of your project?
With more modifications and updates, we think that this project would definitely help farmers all over India to know the exact schemes applicable.
4. What data structures have you decided to use and why?
We've focused on using arrays to store data. Being newbies to coding and shorter time duration led us to focus on concepts taught academically.
5. Do you think any of the other data structures with similar functionality required for your project? Why did you not choose them instead?
Arrays and linked lists are similar in certain ways. We gave a trial over linked list. Lack of knowledge of linked lists led us to focus more on arrays.
6. Have you started working on your project?
Yes, we started with learning the basics of Java and then further continued with DSA concepts.
7. Did you face any problems in these 15 days and were you able to solve them?
Yes, the msentor was able to resolve our queries and guide whenever we needed.
